

CREST RAISE TAILINGS STORAGE FACILITY 1A

On the 5th of January we will be starting work on a crest raise for Tailings Storage Facility (TSF) 1A. This will make the storage facility one metre higher and provide additional tailings capacity for our existing mining operations. The work is expected to continue through to the end of June 2021.

Construction of the crest raise will require earthworks, so you may see machinery operating on the top of the facility.

There will be a range of measures in place to ensure any impacts associated with the crest raise are managed in accordance with our consent conditions. The conditions of these consents require that noise and dust monitoring is

carried out in line with the relevant New Zealand standards, and that representative samples are recorded.

The hours of operation are between: 7.00 am and 7.00 pm weekdays plus 7.00 am and midday on Saturdays. There will be no work carried out on Sundays or public holidays.

You can find out more information on how we manage noise and air quality on our website under environmental management.
